A system for

Inward Patient Management

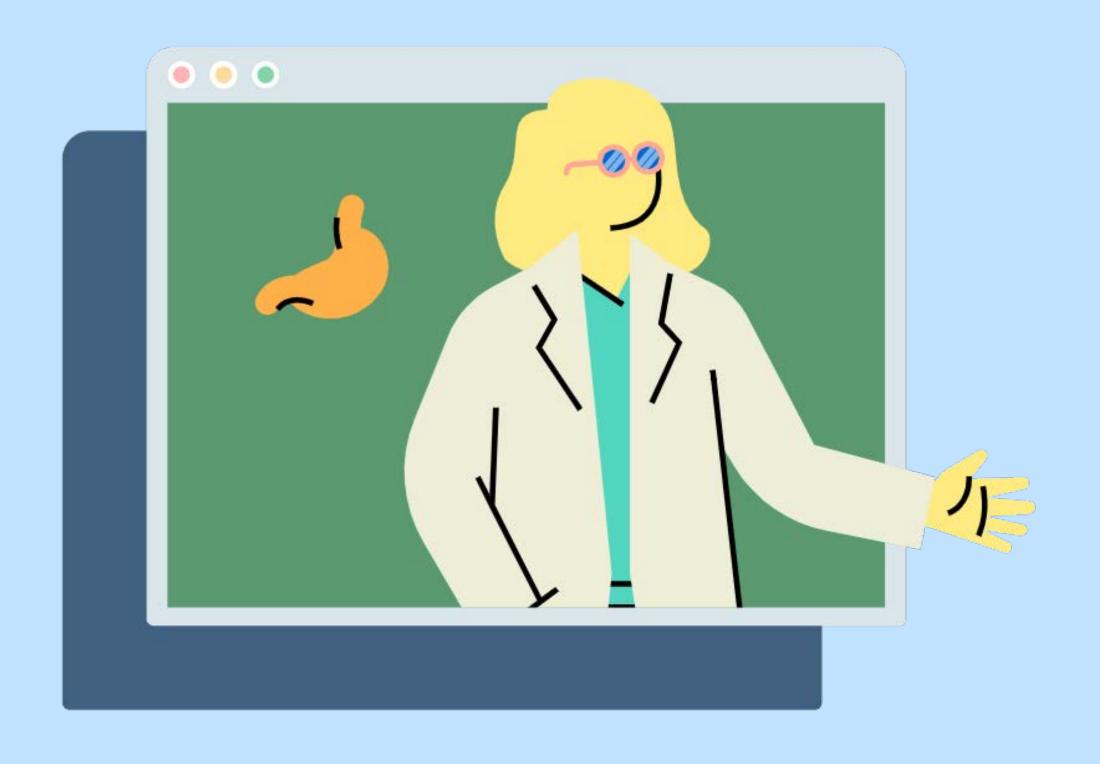

Design Challenge

How can we improve a hospital's management in order to provide better care to patients?

Solutions

1. Gamification

In our system, the assignment of emergency rooms and wards is done through game-like drag and drop.

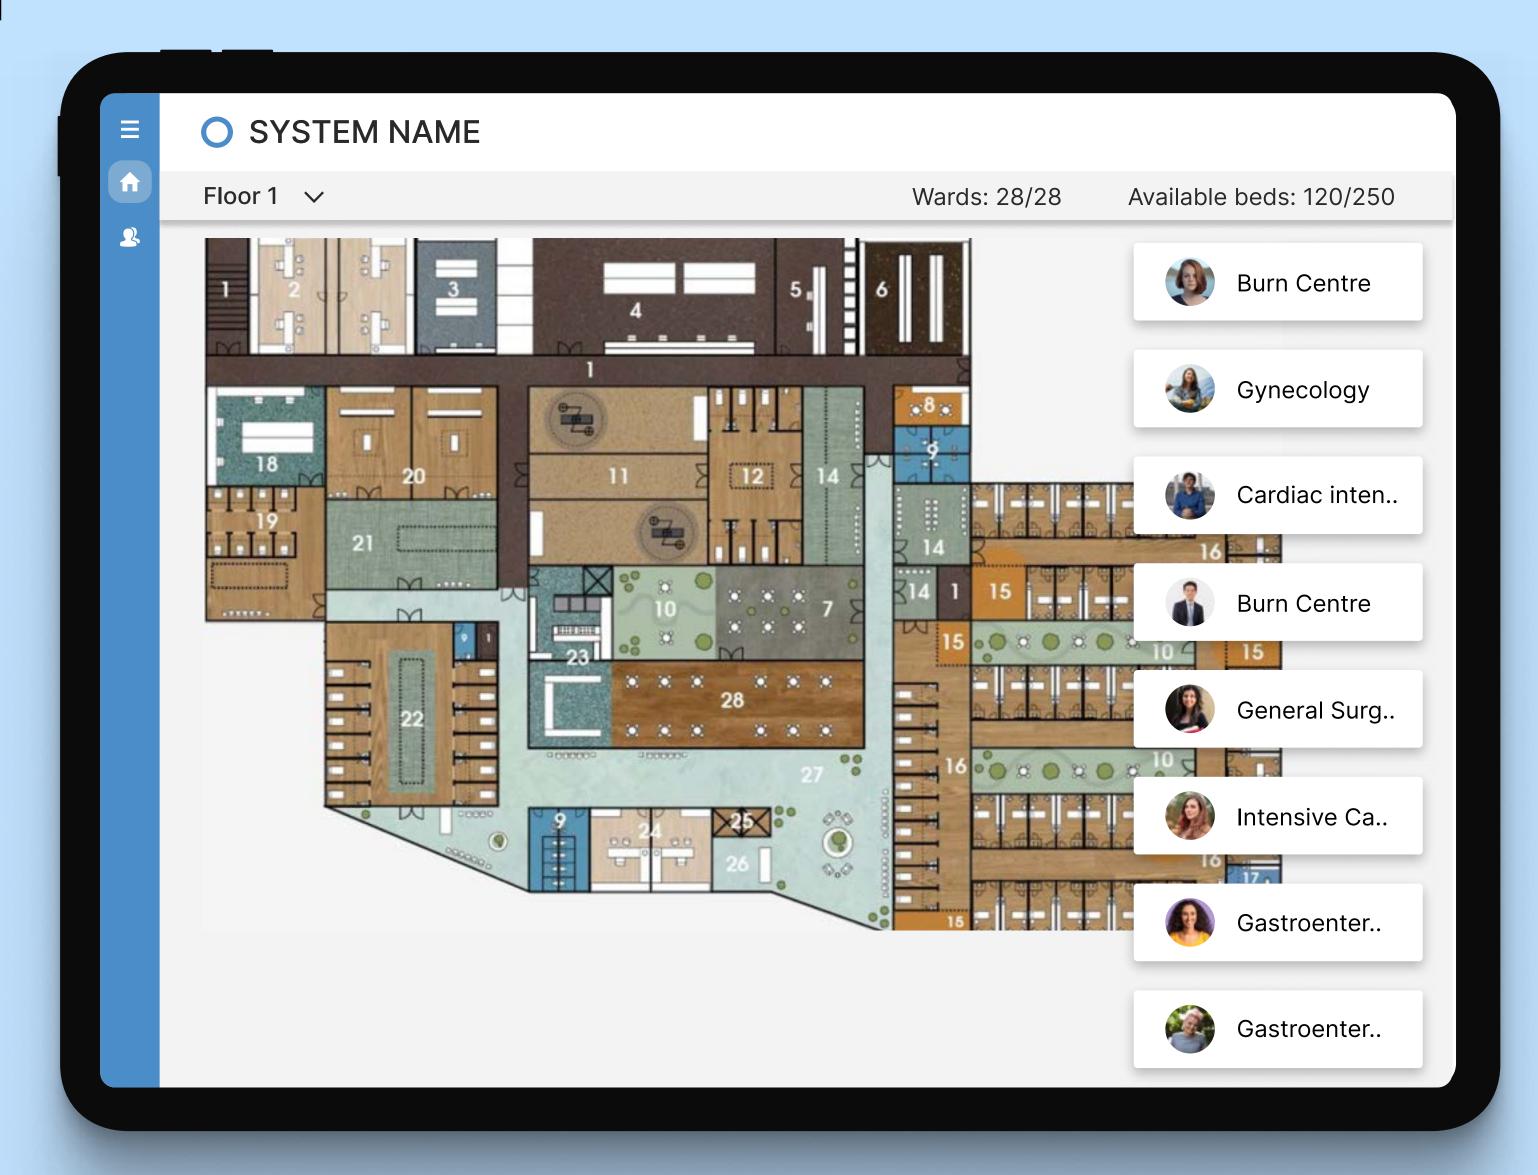

2. Visualization

Map of the hospital can be presented so that users will see clearly which rooms or beds are occupied.

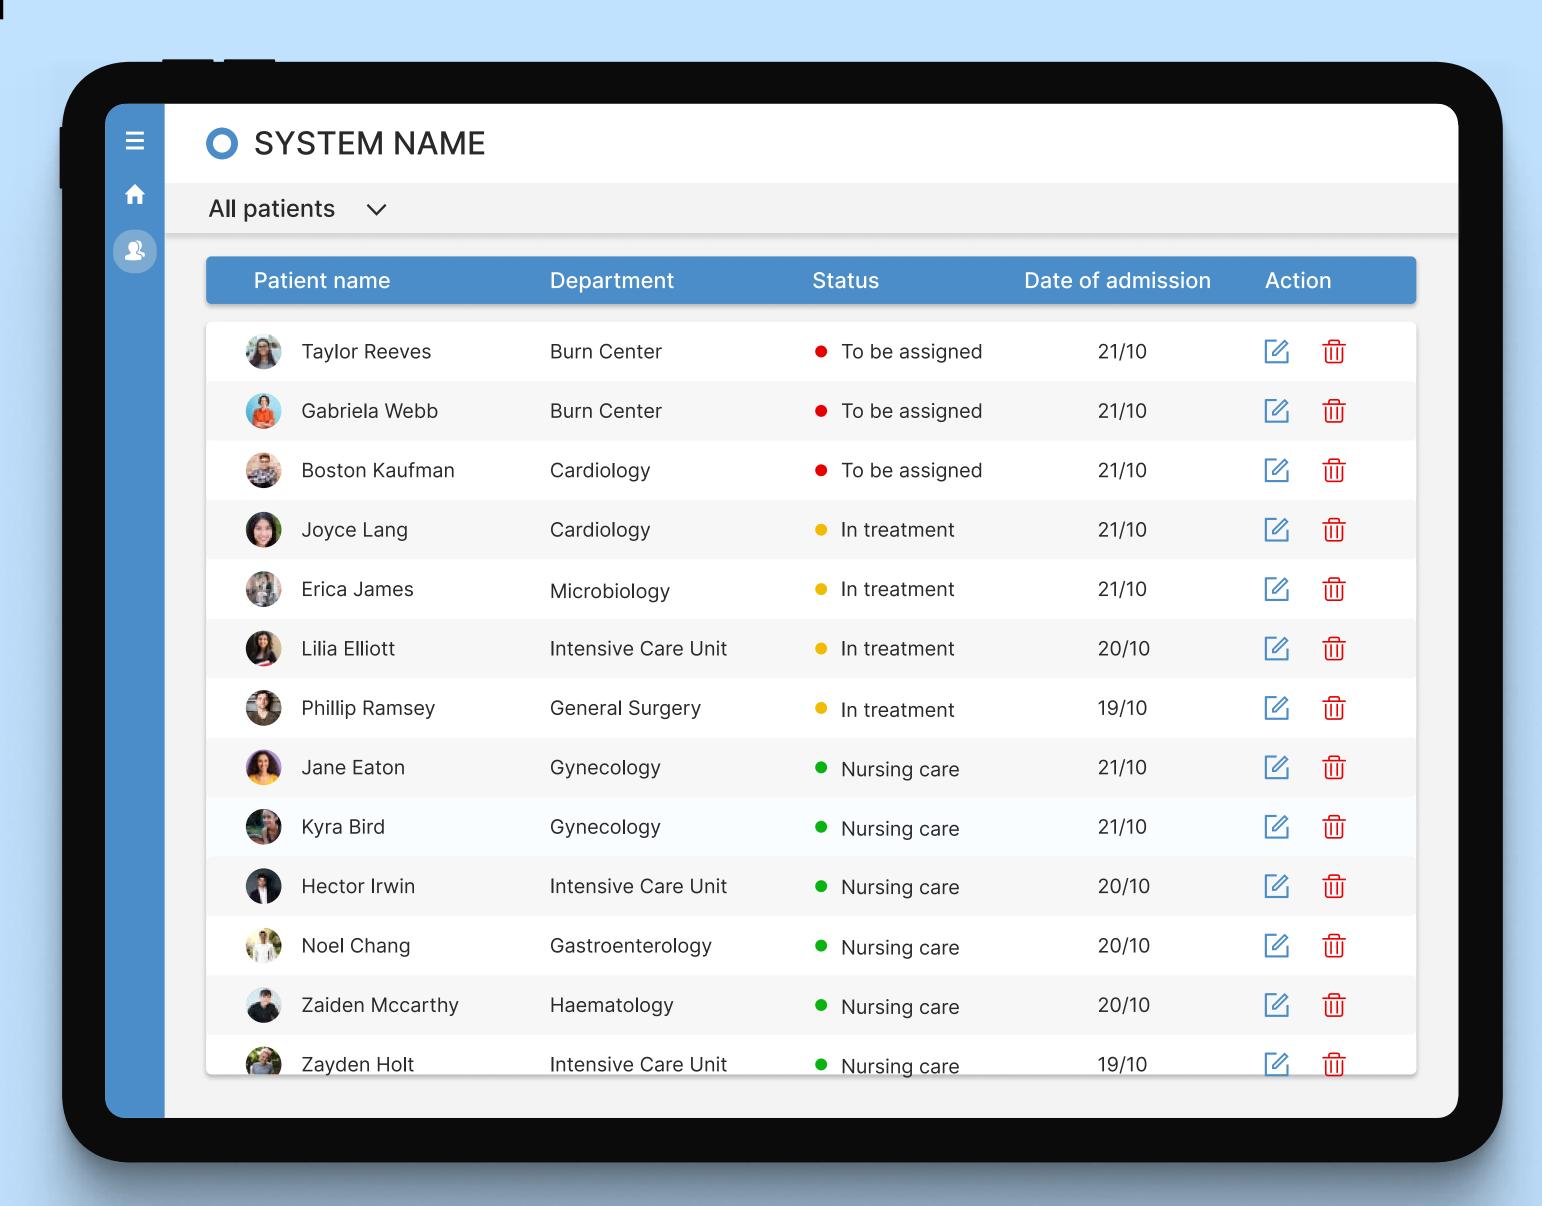

3. Simplicity

We aim to make the interfaces simple to reduce the cognitive load of users.

Design

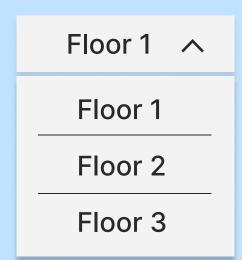

Design

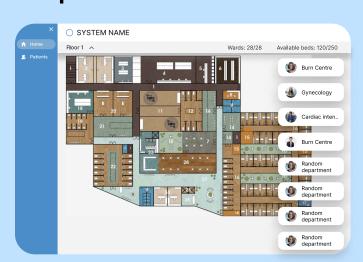

Interactions

1. Click to switch floors

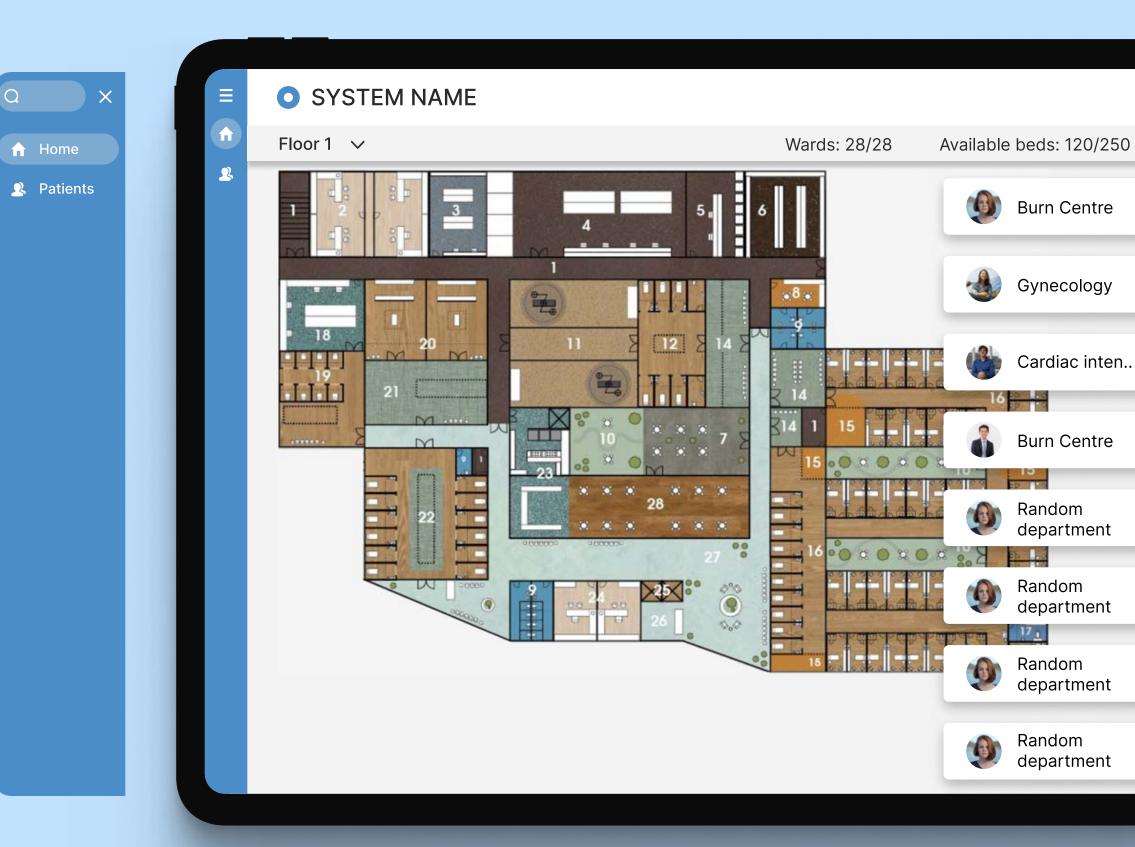

2. Swift right to expand the bar

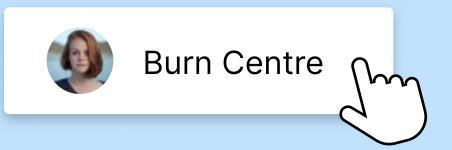

3. Search for a patient in the search bar

4. Drag and drop to assign rooms

5. Click to expand the card for patient details

Cardiac inten..

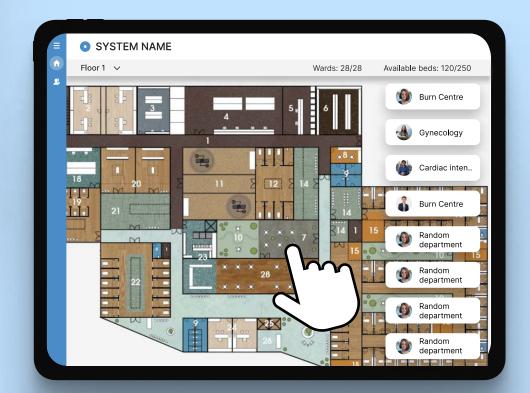

Burn Centre

Random

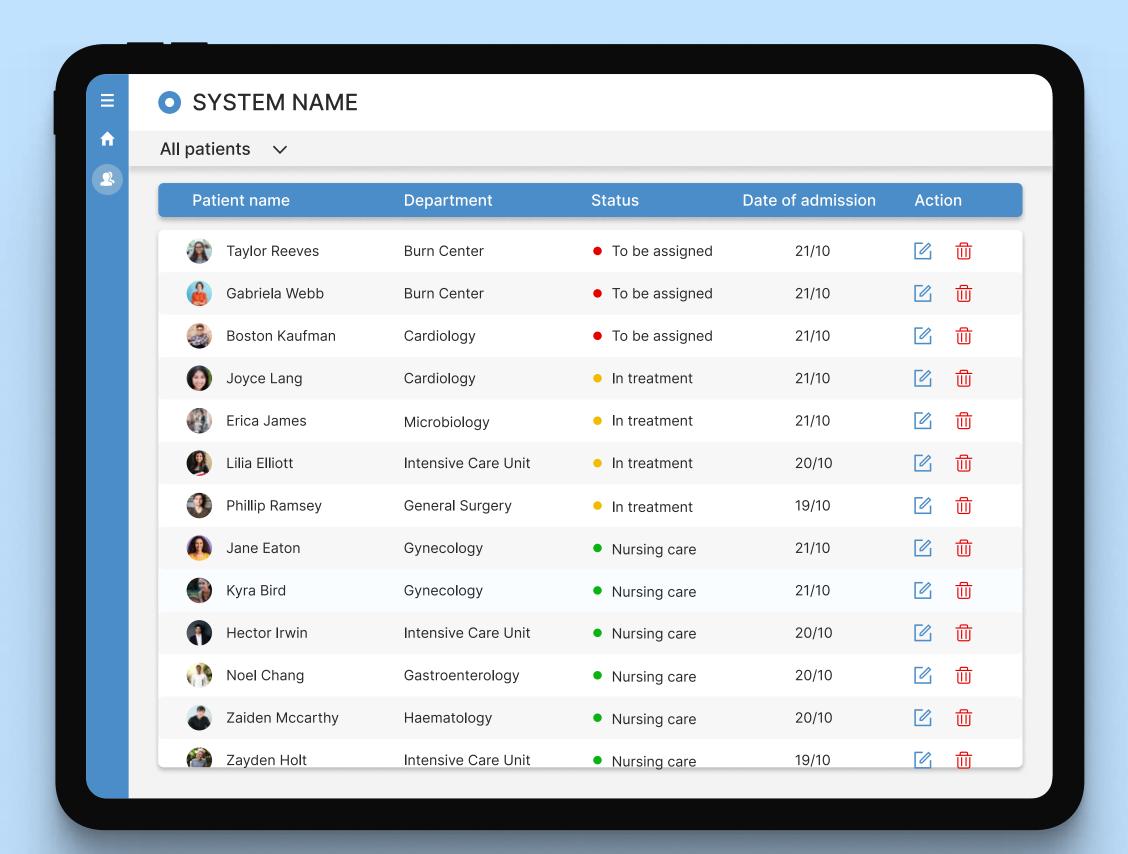

Random department

6. The map can be zoomed in and out

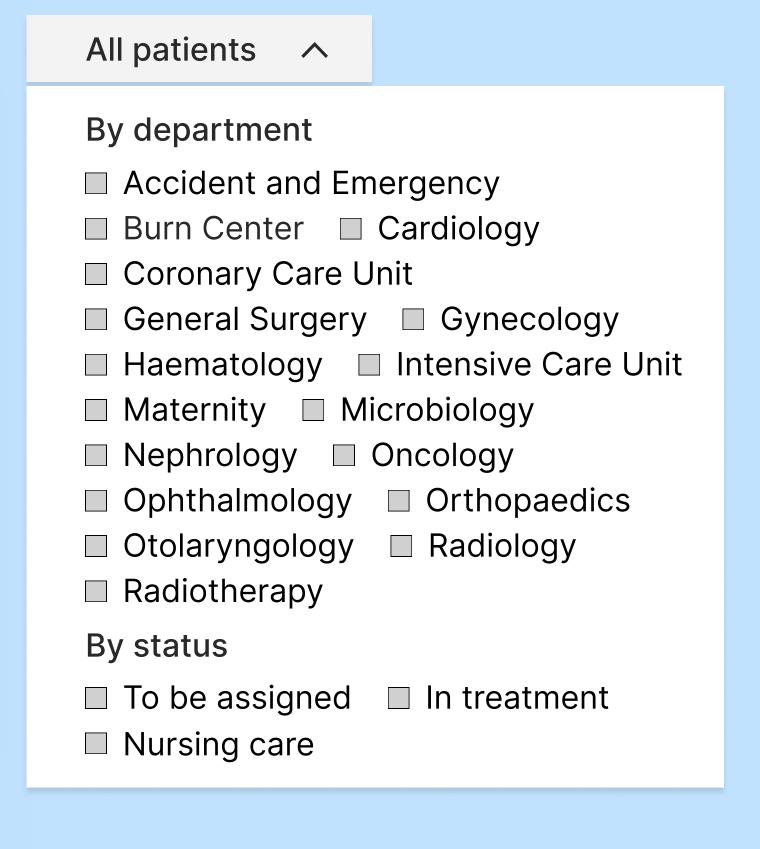

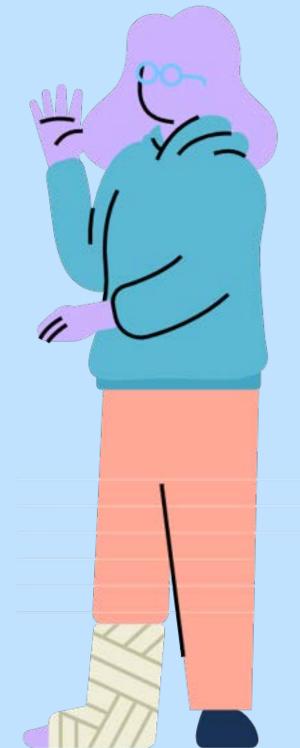

Interactions

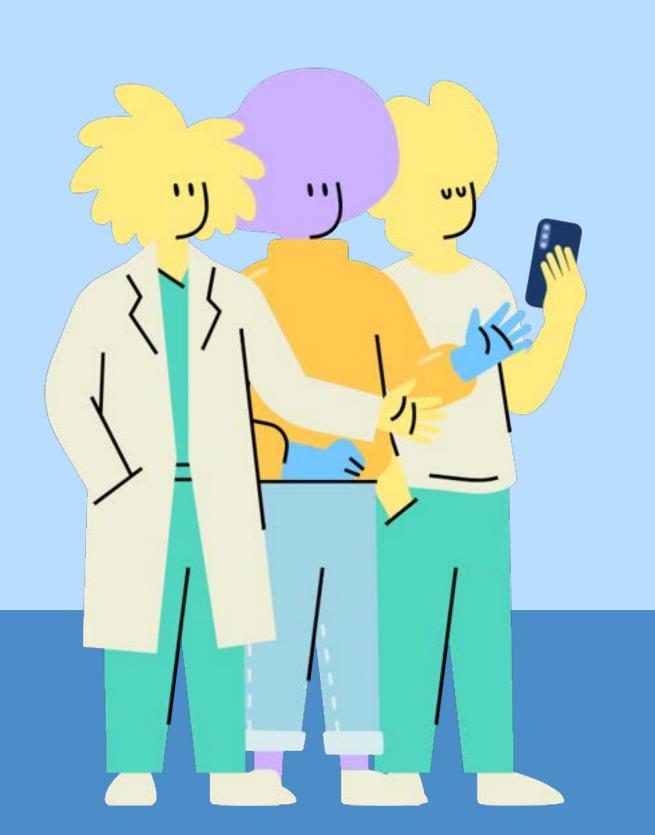

8. Click to view and edit the details9. Click to remove the patient

7. Click to filter patients by their department and status

A System For Inward Patient Management
